2. Parts list revisions

The parts list revisions are determined as follows:

The revision of the parts list and basic parts list is always a lower case letter. The revision of the figure is always an upper case letter. The first version of a parts list, figure, or basic parts list has no revision. All assemblies do not have basic parts lists. Every time there are changes in the parts list, figure, or basic parts list they get a new revision. The revisions are given in alphabetical order.

3. Parts that need to be ordered separately and parts included in the assembly

HOW TO READ A SPARE PART SHEET

4 (4)

There is an asterisk in front of the reference number for parts that need to be ordered separately (figure 2). Parts that need to be ordered separately are not included in the order when it has been ordered using the assembly code.

Parts that need to be ordered separately are included in the assembly if they are included in another part that is in the assembly. If there are parts included in a part that is included in the assembly the list reads "INCL. PARTS". In the example above (figure 2) parts number 50 and 51, plain bearing and circlip, are included in the piston rod (part no 2).

There are alternative assemblies for the example assembly 550 442 22 a (figure 2). The maximum and minimum lengths of the cylinder are shown in the alternative table (figure 3).

ALTERNATIVE	MIN	MAX
55046100	1572	2772
55044222	2172	3972
55046105	2172	4072

Figure 4. NSS assembly

The NSS assemblies are not sold as assemblies but only as separate components. For example, assembly 550 768 40 NSS (figure 4) cannot be ordered as an assembly, but the parts included in it can be ordered separately.
